PLEASE SHARE WITH ALL CHUCK E. CHEESE'S CAST MEMBERS

PLAY THIS SHOW APRIL 1ST THROUGH JUNE 30TH 2014

Happy Spring, 2014 Chuck E. Cheesers! With all of the April Fools' Day jokes going on, we are proud to bring you the Spring 2014 Show, which is no joke! This new show is packed with several old favorites that will get you and your guests moving and grooving.

In addition to the regular show loop, are the super-important Chuck E. Live performances. As you know, this is one of the things that sets us apart from other pizza places. Remember, singing, dancing and interacting with a mouse is not something most people do on daily basis. So keep the energy up, and keep on making Chuck E. Live a fun and unique experience for every guest, whether you are performing for the first time or the 1000th.

One last thing, please see the memo below regarding new audio standards from Mike Tuck, Director of Technical Field Operations. Thanks for all you guys do! Keep on making magic.

New Audio Standards

Lately, there have been a lot of issues with sound levels in the show room, which in turn has created guest complaints. The enclosed show will have a volume level difference of 15dbs between the live/birthday show and the regular show. Below are instructions to your Technical Managers on how to properly set and calibrate the amps for this new setting. Once the amps have been set, it's imperative that amps are not adjusted afterwards.

Step 1: Make sure you have the proper sound meter and it's set to weight c and reaction slow. This must be done in the morning when there is no ambient noise.

Step 2: For Studio C, have the control panel set at 100%. For all other shows, have the volume adjustment set to its highest level.

Step 3: With the show on the Live/Birthday Shows, adjust your amp until your sound meter reads 90 dbs.

Step 4: Confirm your regular show is at 75dbs in the show room and game room.

Step 5: Once you have confirmed the settings, remove amp knobs if possible. If you cannot remove knobs then find a way to make it difficult to randomly adjust the knobs. If none of the above can be done, then mark where the proper volume level is on your amp.

Step 6: Unplug the sense microphone from the back of the Symetrix.

Step 7: On the next directional, go over the volume settings with the managers.

With the new settings, the loudest the show will go is 90dbs. If you have any questions, please get in contact with your DT or RT.
